

June 18, 2012

An additional item which should be noted is that Modification 28 has been voided. This modification dealt with modifying the cap in the southern portion of the park. The final couple of inches of top soil was to have been replaced with wood chips. The entire area has at a minimum, received the specified 18" cap and the application of wood chips if it occurs will be by others at a later date.

Respectfully,

John Steeber
